

**BioLynceus provides biological solutions for wastewater. Our cost effective solutions provide micro-biology that rebalance water environments.**

**The data below shows a three month reduction of sludge in an industrial wastewater lagoon system using Probiotic Dredging™. The measurements were taken from a client who had been using the BioLynceus.**

**This sampling demonstrates how an existing program can perform over a three month time span where measurements were conducted by sludge judging. Typical programs include an initial inoculation and a continuous feeding of the products into the system. Actual results may vary.**

**Sludge Judging      Data 03-07 to 06-07**
